Welcome to "Meet Your KU Community"!

This online networking event is aimed to connect researchers at Kyoto University beyond research areas and faculties.

At our second meet, **Dr. Francesca PINCELLA**, Senior Lecturer, Institute for Chemical Research (ICR), is going to present on the forefront of the **green chemistry**. Green chemistry is a philosophy and a set of design principles that are rooted in pollution prevention. It is an essential topic to think about sustainable society and we look forward to participation from researchers in variety of fields.

Timeline	12:10	Introduction
	12:10 -12:25	Presentation by Dr. Francesca PINCELLA "Green chemistry for a more sustainable society. "
	12:25 -12:50	Q&A and networking
	12:50 -12:55	Updates from KURA

Speaker

Francesca PINCELLA

Senior Lecturer,
Institute for Chemical Research
(ICR)

My background is in soft matter physics, but in the past decade I have wandered through materials chemistry, biomedical engineering and organic chemistry laboratories, with nanoparticles being the leitmotif throughout the years. Recently, I have been working on the valorization of lignin, a promising candidate to replace fossil fuel as a source of aromatic compounds.
